EXPERIENCE

Associate Software Engineer

Gordon Food Service (IT Warehouse Team)

March 2016 – Present, Grand Rapids, MI

Working with the IT Warehouse team, I have helped develop and support the warehouse management system. I am the subject matter expert on Inventory Control and Material Handling Control Systems. On a team of 14 people I played a big part in the most recent warehouse project where we created and deployed a new Angular app to replace old telnet devices in the warehouses. This project updated and revamped software used throughout the entire warehouse for receiving, selection, inventory control, and shipping. I completed 22% of the 200+ bugs that came in over the 10 month roll-out of the software to all warehouses.

Asset Administrator

Gordon Food Service (North American Asset Management Team)

May 2015 – March 2016, Grand Rapids, MI

Automated the internal IT hardware & software PO request system. It was originally a Google spreadsheet that was filled out and emailed to our team for review. I used JavaScript to add field validation to make sure the user had all the information needed based on the type of request before submitting. As well as added the ability for an Asset Administrator on the team to generate a PO number, save as a PDF, and store the request in the proper folder with a click of a button. Resulting in faster throughput for PO requests and our team being the winner of the Gordon Food Service J&P Cup award, a yearly award given to one of the IT teams.

Sales Associate

Gordon Food Service (Cascade Store)

September 2013 – May 2015, Grand Rapids, MI

EDUCATION

Bachelor of Science in Digital Media Software Engineering

Ferris State University • Grand Rapids, MI • 2017
